

Junior baking day

Hi everyone,

I hope you are keeping well. I have outlined some activities for your baking day today. Feel free to try one of the recipes or even both if you have all the ingredients. The science experiment will take a few days to grow, have fun.

Recipe 1 – number biscuits

The idea behind this recipe is to find different ways of making the number 10 using the sweets on top. Try and make some patterns with the colours too if you can. When you are finished count all the ways that you can make 10

Recipe 2- playdough

In this recipe you are going to create your own playdough. When you are finished you can create anything you like with your new playdough.

Science experiment – you will be creating sugar crystal sparklers, although you might have to be patient as it takes a few days for the sugar crystals to grow.

Activities- there are 2 additional activities, a word scramble and a word search. You could complete these activities while your biscuits are cooking or even while you are eating them.

Enjoy your baking day and remember to have lots of fun! 😊
